SUMMARY

Senior Full-Stack Engineer, 11+ years. Java, Spring Boot, React, GCP/AWS. Currently on a 25-microservice Google Cloud Run platform at METRO.digital where I introduced agentic AI workflows across the engineering team; before that, fintech, banking and payments engineering for A2X, ING, Mastercard and NETS.

SKILLS

Top skills: Spring Boot, React.js, AI-Assisted Software Development, API/Microservices Design, Java

AI and security: Claude Code, GitHub Copilot, Context Engineering, Agentic AI Development, Prompt Engineering, Threat & Vulnerability Management, Software Supply Chain Security, DevSecOps

Cloud and DevOps: GCP (Cloud Run, App Engine), AWS (ECS Fargate, Lambda, CloudFront), Terraform, Docker, GitHub Actions

Frameworks and languages: Java 21, Spring, React, TypeScript, Vue.js, Python

EXPERIENCE

Senior Full-Stack Engineer

METRO.digital | Contract | Remote | Dec 2025 – Present

- Led AI adoption as the first engineer to introduce agentic coding workflows on a 25-microservice GCP / Cloud Run platform, using GitHub Copilot CLI and AGENTS.md context engineering across all repositories, adopted team-wide and significantly accelerating cross-service development
- Delivered end-to-end full-stack features across Java/Spring Boot microservices and React frontends, owning REST API design and third-party integrations from requirements through production, and partnering with product and business stakeholders to align API contracts
- Drove DevSecOps and software supply chain security across frontend and backend services: integrated Black Duck Polaris (SAST/SCA) scanning into GitHub Actions CI/CD on every pre-production merge, automated Jira ticket creation for new findings, and used AI-assisted remediation to resolve high and critical CVEs, reducing mean time to remediation by 20%
- Resolved production issues across a distributed microservices architecture on Google Cloud Run, performing root-cause analysis and shipping fixes that reduced production incidents by 50%

Skills: Java 21, Spring Boot, React, REST APIs, Microservices, Google Cloud Run, GCP, GitHub Actions, Agentic AI, GitHub Copilot, AI-Assisted Development, DevSecOps, Software Supply Chain Security, SAST/SCA, Black Duck Polaris, Renovate, Jira Automation

Founder

Evogile | Self-employed | Remote | Jan 2024 – Present | evogile.com

Solo-built a fintech platform for direct indexing: investors replicate ETF strategies by owning the underlying assets directly.

- **Cloud infrastructure:** AWS (ECS, Fargate, ECR, CloudFront, S3, API Gateway, VPC, IAM, CloudWatch, Route 53, Secrets Manager, SES, Elastic Load Balancing, VPC Peering, Lambda), Infrastructure as Code (Terraform)
- **Backend:** Java 21, Spring Security, JWT, MongoDB, Redis
- **Frontend:** React Vite SPA, Tailwind CSS, Google OAuth, Stripe integration
- **DevOps:** Docker Containerization, GitHub Actions for CI/CD
- **Testing and quality:** JUnit, Mockito, SEO optimization

Senior Full-Stack Software Engineer

A2X | Contract | Remote | Oct 2022 – Mar 2024 | a2xaccounting.com

- Designed and implemented an auto upgrade/downgrade algorithm for customer subscriptions, increasing Monthly Recurring Revenue (MRR) by approximately $100k by keeping customers on the most suitable plans
- Refactored a significant portion of the application (App Engine tasks) to migrate from Google App Engine to Google Cloud Run (Cloud Tasks), achieving 30% performance improvements and reducing operational costs by 15%
- Implemented 3 OAuth2 API connections with major e-commerce platforms, enabling seamless integration and data exchange and expanding the company's reach and functionality for customers
- Led migration of application entities to a new Google App Engine Datastore API, improving data read/write efficiency and overall performance by 50%
- Migrated session management from Google Memcache to Redis, reducing latency by 25% and improving session reliability
- Moved file storage from Google App Engine libraries to Google Cloud Storage, streamlining the Cloud Run migration and cutting storage access times by 20%
- Redesigned the OAuth sign-in flow from server-side JSP pages to a Vue.js Single Page Application, and added a Microsoft OAuth flow for authentication and authorization

Skills: Google Cloud Platform, App Engine, Google Cloud Run, Memcache, Datastore, Redis, OAuth2, Vue.js, JSP, API design & security

Senior Software Engineer

ING Hubs Romania | Full-time | Bucharest, Romania | Mar 2022 – Jul 2022

TouchPoint platform – Involved Party API

- Contributed to a new endpoint providing data-collapse functionality for business entities as part of the data deduplication process, streamlining data consolidation and improving data quality
- Acted as Release Train Coordinator for 10 APIs, orchestrating deployments across Test, Acceptance and Production environments, ensuring smooth release cycles and minimizing downtime

Software Engineer

ING Hubs Romania | Full-time | Bucharest, Romania | Jul 2020 – Feb 2022

TouchPoint platform – Party and Agreement Search API, Integration Layer API

- Designed and built a search engine API from scratch using hexagonal architecture and Elasticsearch, streamlining data deduplication and improving processing efficiency by 25% for large datasets
- Served as Security Champion, implementing secure coding practices and mutual TLS authentication for a data loading application
- Acted as Scrum Master, leading 10+ sprints with a 20% improvement in team velocity by optimizing ceremonies and backlog prioritization
- Developed integration and performance tests for 15+ API endpoints, achieving 95% test coverage and reducing production issues by 15%

Software Engineer

CoCoNet Group | Full-time | Bucharest, Romania | May 2019 – Jun 2020

Multiversa – Digital Corporate Banking Platform

- Implemented and integrated a new payment format into Multiversa using in-house frameworks
- Redesigned legacy code and updated 10+ modules with modern packages, reducing technical debt by 25% and improving stability and performance
- Conducted unit, integration and Selenium tests, achieving 90% test coverage across critical modules and reducing production issues by 15%

Software Engineer

Endava | Full-time | Bucharest, Romania | Oct 2016 – May 2019

Projects: Mastercard – Real Time Payments, Pay360 – Multi-channel Payments, Credit Suisse – Internal Incident Management Platform, NETS – Instant Payments Clearing House

- Implemented ISO 20022 validations for credit transfer messages between banks, ensuring 100% compliance with industry standards
- Developed a module for data migration and synchronization between two databases with distinct data models, achieving 100% data accuracy
- Maintained an L3 support platform, resolving 50+ technical support tickets monthly and improving response times by 25%

Mobile Application Developer

Ubisoft | Internship | Bucharest, Romania | Jul 2015 – Oct 2015

- Developed a prototype village-based mobile game in Unity (similar to Clash of Clans), with a customizable framework for graphics and game settings
- Implemented a touch-based UI, isometric camera, collision checks and simple AI for 5+ in-game units, plus custom shaders that improved graphical performance on mobile (Unity 5.1, C#)

EDUCATION

Master's degree, Advanced Software Services

University POLITEHNICA of Bucharest | 2016 – 2018 | Grade: 10

Bachelor of Applied Science (B.A.Sc.), Computer Science

University POLITEHNICA of Bucharest | 2012 – 2016
